

***Renewable Energy Solutions
for Business and Industry***

About UGI Energy Services

UGI Energy Services **supplies and markets renewable natural gas, carbon offsets, and renewable energy credits** to customer locations across the continental United States. We support our renewable marketing business by owning and operating renewable product production facilities throughout the country. In addition, we supply and market **commodity natural gas, liquid fuels, and electricity** to over 40,000 customer locations across the Mid-Atlantic and Northeastern U.S. We are a supplier, marketer, and midstream services provider—one **backed by over 140 years of natural gas experience**, plus our own **expanding energy infrastructure**. Along with buying and selling energy commodities at the wholesale level, we own and operate key electric generation and midstream natural gas assets throughout the northeast.

Ultimately, our focus on personalized service helps us develop solutions best suited to your unique needs.

We have a long-standing history as a natural gas provider—one that our customers have backed for decades.

**Learn what
UGI Energy Services
can do for you.**

Why Choose UGI Energy Services?

We ensure you receive:

Customized energy solutions to fit your needs

Transparent pricing

Informed answers, experience, and support from a market leader

Predictable budgeting

Flexible access and reliable service

No hidden fees

Why Go Green with UGI Energy Services?

We're committed to:

- ***Sustainability***
- ***Action against climate change***
- ***Broadening your renewable energy portfolio***
- ***Reducing your greenhouse gas emissions***
- ***Carbon footprint reduction***
- ***Low- or zero-emission production sources***
- ***Helping you achieve your Environmental, Social, and Governance initiative goals***
- ***Communicating with the public and the communities we serve***

Our Services

*Convenient. Dependable. Resourceful.
Experienced. Impressive.*

Renewable Natural Gas

Renewable Natural Gas "RNG" is a pipeline-quality Biogas that is interchangeable with traditional geological natural gas.

Biogas is produced through the breakdown of organic matter, or biomass. We gather and refine this Biogas to recover a renewable energy source in the form of RNG. RNG is produced from a variety of sources, including dairy or swine manure, municipal biosolids, food waste, and municipal solid waste primarily located in landfills.

Because we are a renewable energy marketer that owns and operates our own RNG production assets, our plans are highly reliable both financially and physically. Equally important, our focus on providing highly personalized services helps us structure plans tailored to your key demands.

You will benefit from:

- Replacement of traditional natural gas heating load or CNG/LNG vehicle fuel.
- Fixed or market-based pricing options designed for every budget.
- Renewable usage in your existing portfolio, demonstrating your greenhouse gas reduction goals.
- Guidance on managing cost components, including rebates or discounts.

Carbon Offsets

A Carbon Offset represents the GHG emission reduction of one metric ton of CO₂ or CO₂ equivalent from the atmosphere.

Offsets are created when projects reduce or avoid GHG emissions. They are produced from a variety of projects, located anywhere in the world, to include forestry and conservation, methane capture, energy efficiency, and renewable energy projects.

We purchase and retire Carbon Offsets on your behalf. Our plans will help you manage your renewable goal expenses more proactively through custom tailoring that fits your specific needs.

You will benefit from:

- Cost-effective net reduction or total offsetting of your organization's GHG emissions.
- Flexible plans allowing for your choice of Carbon Offset type and geographic sourcing preference.
- Option to reduce emissions outside of your controlled operations.

GreenerGas

Remove the ambiguity with a carbon-neutral, cost-effective, flexible plan that meets your short- and long-term ESG goals.

With GreenerGas, your organization can make a real, direct impact on environmental goals while finding a solution that fits your budget. The combined turn-key product delivers renewable natural gas and Carbon Offsets to your organization, maximizing your purchasing power by taking advantage of product price differentials and market conditions.

You will benefit from:

- Natural gas consumption carbon neutrality and alignment with your ESG goals.
- Fixed pricing per tranche allowing for transparency in your organization's budgeting, forecasting, and compliance costs.
- A turn-key product, simple and effective.

Lower direct impact
Lower cost

Renewable Natural Gas

Higher direct impact
Higher cost

Renewable Energy Credits

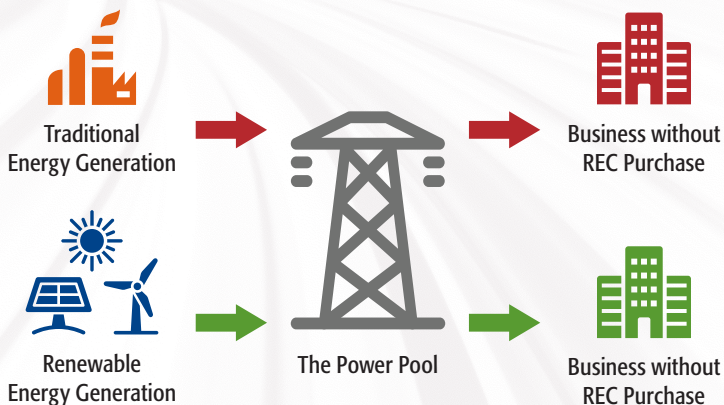

A Renewable Energy Credit "REC" represents the clean energy attribute of renewable electricity generation.

RECs are generated from sources such as wind, solar, and biomass. They are highly liquid and are purchased by electric customers to convert non-renewable consumption into renewable electricity.

Our Renewable Energy Credit marketing services bring affordable green electricity claims to markets that need it. Unlike REC marketers that only buy and sell RECs in the marketplace, we own key generation assets. Our facilities are strategically located and by combining and optimizing the use of our own generation assets in the broader market, we will keep your organization dependably supplied with RECs.

You will benefit from:

- Cost-effective and custom-tailored plans for your organization's electric usage.
- Plan options for both compliance and voluntary market purchasers; flexibility on type and source of RECs purchased.
- Green electricity consumption and GHG reduction claims.

Businesses We Serve

With significant expertise in buying energy products for all kinds of industries and businesses, we have all the right options at our fingertips. We can skillfully recommend customized, cost-effective energy solutions tailored to your needs. Together, we will create the right plan to help you reduce and control renewable energy expenses. Our customers include:

Transportation

Do you have a CNG or LNG fleet that you would like to fuel with RNG? We will help you assess your needs and develop a gas delivery and rebate sharing plan through your participation in the EPA's Renewable Fuels Program and California's Low Carbon Fuel Standard.

Commercial

Mitigate the impact of shifting gas supply networks and seasonal price swings with strategies and energy supplies backed by our own renewable natural gas and green electric generation assets.

Institutional

Manage your services more cost-effectively and maintain your quality of services with a highly reliable green energy supply for your compliance or voluntary goal needs.

Industrial

Together, we will develop flexible, proactive service plans and strategies to keep your operation running and carbon neutral despite market disruptions and volatility.

Government

From participating in the bidding process to consulting and expertise, we will help you best manage your energy costs, requirements, and renewable mandates.

National Accounts

Manage your multi-state, multi-region energy requirements, control energy costs, and maintain productivity, all while reducing your GHG emissions.

Small Businesses

Are energy demands consuming too much of your budget and time? Is evaluating green energy products confusing and time consuming? We will help you assess your energy-buying habits and develop a purchase and procurement plan that works for you.

***Our value goes beyond
our fair and honest pricing.***

***We're a specialty energy provider dedicated to
solving almost any problem and striving to meet
each of our customers' needs.***
